

Primitive Religious Beliefs have no place in a Science Class

There are people that believe that the Bible is the word of God and therefore what the Bible says is true. "God said it, I believe it, and that's that!" We live in a country where everyone has the right to believe whatever he or she wants no matter how stupid it is. But that doesn't make it any less stupid. We are starting a new century and it's time we started looking at reality the way it really is.

I am writing this for the children of the State of Kansas so that those of you who surf the web can read about real science rather than be forced to endure your state's bizarre religious views that they insist on calling science. If they throw out the science of evolution because it doesn't agree with the Bible, then they'll have to throw out Astronomy too, because Astronomy doesn't agree with the Bible either.

If we're going to promote mythical based beliefs in schools and allow local school boards to teach Creationism instead of Evolution, then why not allow local school boards to teach Astrology instead of Astronomy? We'll just redefine Science to mean whatever the majority of the local school board believes. If a local school board thinks the world is flat, then the world is flat. I better not give Kansas any more ideas. I've been to Kansas and you don't have to be there very long before the belief that the world is flat seems plausible.
